complementary would be linux kernel training also offered by Bootlin. Otherwise greatly reached. Programm is very rich. Real time logically left away, hoping the sildes (good material sounds good!) are enough to reach also that objective.

Please tell us why you need or don't need paper printed materials

printed materials are very useful to take handwriting note during the session. So, at the end, either you provide them, either we print them.

bravo as added a real value, even for post reading possibilities

The third party libraries and applications section is a bit too long, especially when you redo the same things again and again. It could be reduce to do manually a typical working example, few with some different troubleshooting explanation steps, and have the other needed libs ready to copy/paste.

to better understand what I am working one when not being in the development team but in the system validation team.

What part(s) of the course did you like most?

How to build a Linux system from scratch, step by step, using (relatively) simple examples.
usefull to understand fundamental concepts.

almost all !

What part(s) of the course did you like least?

None.

the part dealing with licensing, even if I know it is important. But as I am not part of the dev team, it has less impact for me.
