How was the duration of the course?

1 response

Comments and suggestions

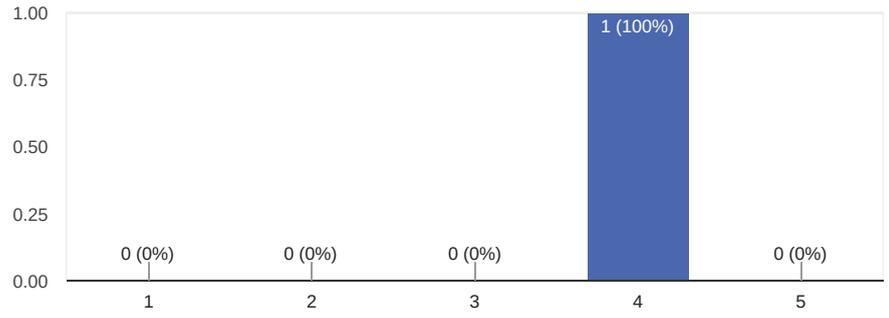

1 response

I suggest to have a 5 min break every hour. Two hours without break is too tough.

How useful were the training materials?

1 response

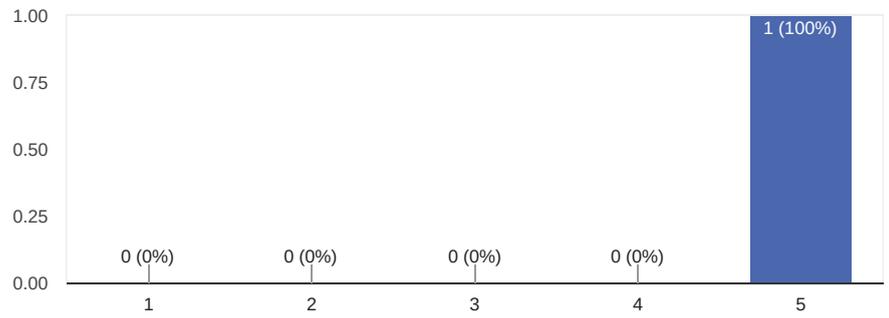

Comments and suggestions

1 response

Some slides were too buzy for a presentation, but on the other hand it makes a great reference to be used afterwards. I've already used it A LOT after the course.

How knowledgeable was the instructor?

1 response

Comments and suggestions

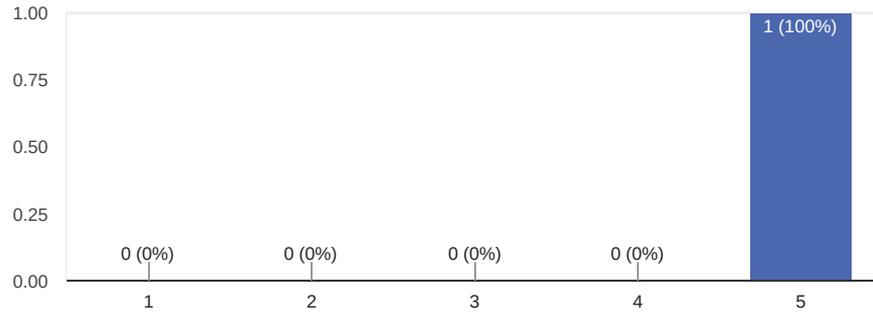

1 response

Thomas was extremely knowledgeable, and his passion really shows. He's able to answer nearly every question thrown at him.

How much value did the instructor add to lecture materials?

1 response

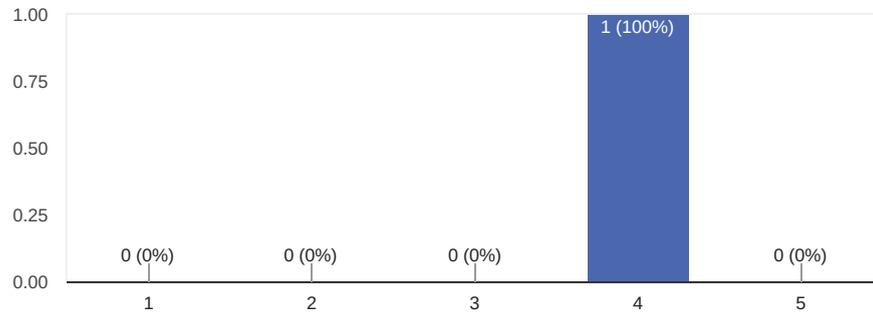

Suggestions and comments

1 response

I know you've shared the slides for free on buildroot website which is very generous. That probably boosts your sales on the course. I wouldn't have found you otherwise. Good move! The slides by themselves are a good starter but the added value of the instructor makes it really worth the money.

How useful were the practical demos?

1 response

Comments and suggestions

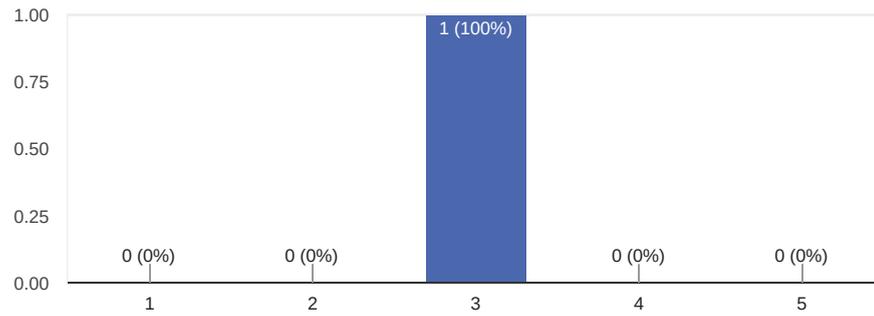

1 response

It'd be much better if I'd made the labs myself between the sessions with a real beaglebone (or emulated), to get my hands dirty and get a better feel for it. But I didn't. Thomas' demos were good, but it's always better to do stuff yourself.

Was enough time dedicated to practical demos?

How well was the course organized (program, registration, schedule...)?

1 response

Comments and suggestions

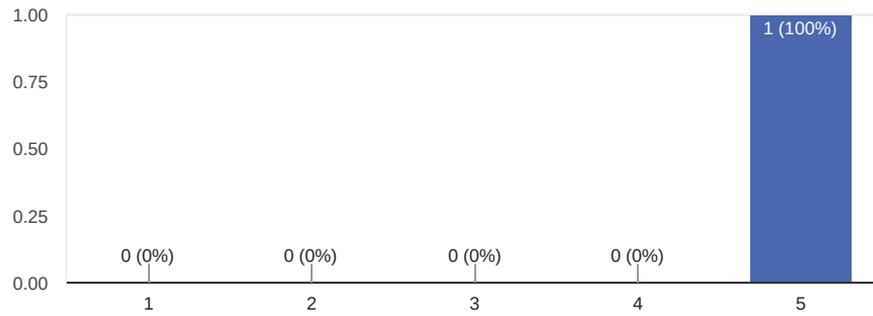

1 response

Four hour sessions are pretty tough. Would be better to have two two hour sessions separated by one hour, for example one before lunch and one after. You have you get up to the surface to breathe once in a while.

How much did you learn?

How useful should this course be in your daily job?

1 response

Comments and suggestions

1 response

I've been looking at buildroot for a few days before the course and it was quite an uphill. I knew that it could be done with buildroot, but getting there in practice was something else.

What part(s) of the course did you like most?

1 response

The basic stuff that applies to (almost) all users of buildroot, for example BR2_EXTERNAL and separate output dirs, defconfig, and how to create packages.

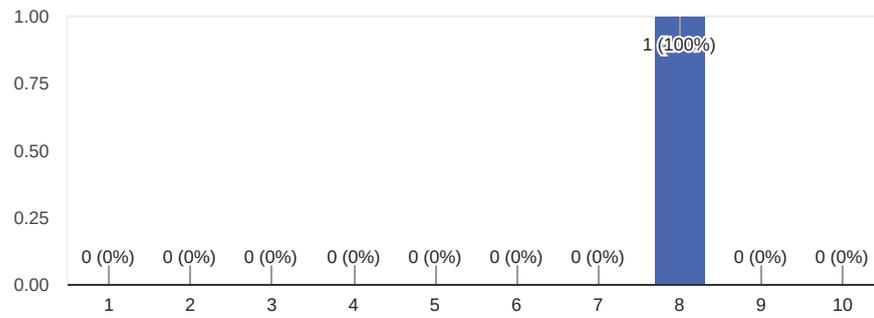

What part(s) of the course did you like least?

1 response

The buildroot internals. Maybe that could be skipped, because it had to be run through too quickly.
