- Contents of the course were really good.
- Instructor was really good.
- It was a little difficult to follow along the labs with the instructor since there were multiple steps involved. It would have been easier to have more detailed steps in the lab manual and have us try to do the labs as homework the day before the session. Nothing stopped us from doing that without being told :) but it would have been nice to know that labs could be difficult to do at the same time as the instructor.
- At some point there were some internet issues on the instructor side but they were handled gracefully.
- All technical questions were handled skillfully by the instructor
- Instructor helped me identify an alternative hardware for the training even before it started.

I know Yocto is a big and complex project, but some sort of cheatsheet with the most used/important variables and tips & tricks would be really nice

How would you rate the trainer?

Maxime is good at explaining difficult topics and have a deep knowledge about embedded Linux and Yocto

Comments and suggestions

1 response

As a beginner in Yocto and embedded Linux, there was a lot of new terminology and knowledge to understand, but I feel a lot better about working professionally with Yocto now

What part(s) of the course did you like most?

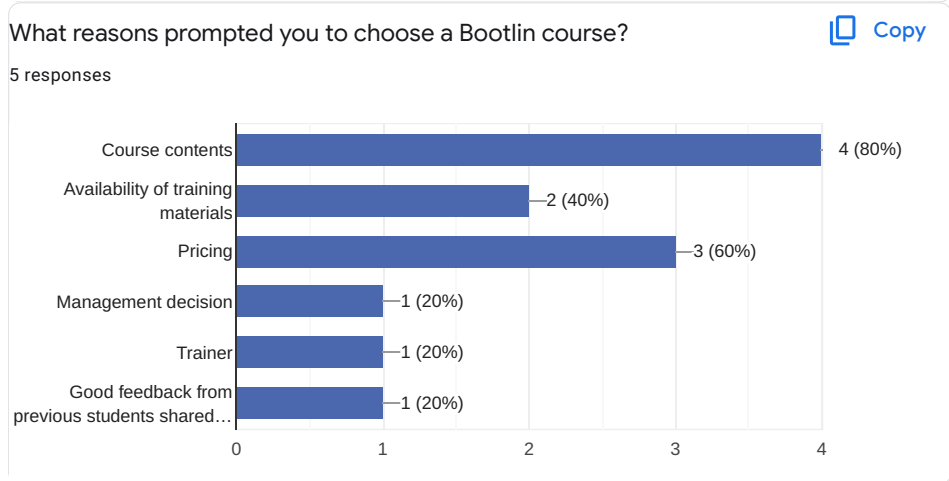

1 response

Practical demos. It's nice to see the theory being applied

What part(s) of the course did you like least?

1 response

The time, but I understand this is difficult due to attendees from different timezones
