This course is excellent to see how much huge and how can it be like a swiss army for embedded users

-the course was too fast on some topics,
-maybe add some times for questions before every break

## How useful were the lectures?

The lectures are very good. It increased my outlook for Yocto

How useful were the practical demos?

We rushed some of them.

It would also be easier to follow what he was showing if he had different colors in his shell, to know what line is his input and what lines are output generated by the commands.

The integration of nInvaders and nunchuk are awesome. It took my interest during the labs

How would you rate the overall organization of the course?

I really like when the person doing the training is actually working on the project, that's to make a huge difference.

He was an expert on the matter, he knew when to let us take breaks to energize ourselves a bit.

How did the course meet your learning objectives?

I missed a mention to recipetool

In my case, I had never worked with yocto before so I feel like I will need some time to fully integrate and assimilate all that was taught in the course, by developing my own recipes and compilations. So at first it was a bit hard to follow.

What part(s) of the course did you like most?

5 responses

The fact that we created a layer, and we increased functionality over time. Creating a base layer and then converting it into a BSP layer and a distro layer after that. That really made all the pieces to fall together.

Practical labs

The game implementation, debugging the problems one-by-one

all the course , it is a very complete training

the demos

## What part(s) of the course did you like least?

2 responses

How fast it was. I appreciate them not wanting to take too much of our time, but this course could be 5 days instead of 4 and the knowledge would be better assimilated.

nothing

What reasons prompted you to choose a Bootlin course?   ⧉ Copy

I've enjoyed it a lot. I hope you keep doing this for a long time to come!

Thanks a lot

Further training needs?

2 responses

Linux kernel, Kernel modules development, Maybe introduction on how to contribute to Build root and Yocto

maybe demos in different boards. to show how easy is to use yocto.
