Very interesting and helpful to get started with yocto

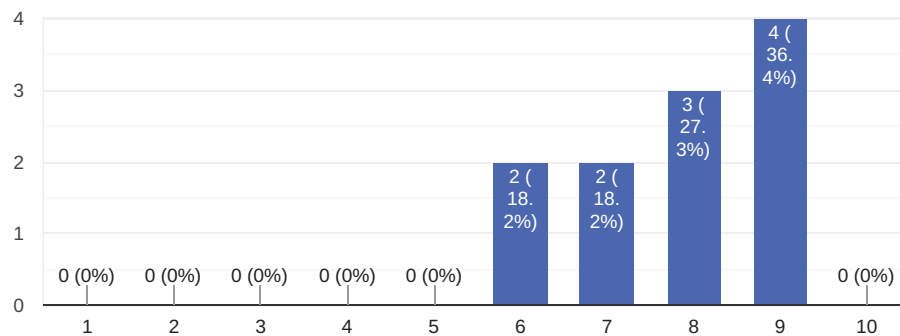

It was clear that this was the first time the course had been held.

Yocto is a complicated topic, I feel that a 3 days course is too short.

Some parts were quite theoretical and seems like too detailed obvious usages. my suggestion: redesing the labs to cover more that was heard in the lectures.

Especially in the beginning, the training introduces new keywords rather fast. I had previous knowledge about Yoco, e.g. what is a recipe, what is a layer, and so on. If I would have been new to this topic, I probably would not have been able to follow.

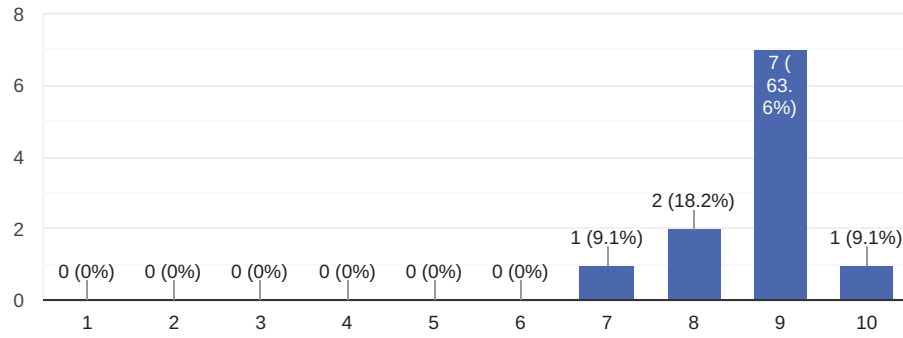

In general, I would appreciate before every section a short "high level overview". What will we be talking about next, and how will it fit into the bigger picture.

The labs were good, but also there should be much more of them, e.g. more exercises on how to use devtool.

Better knowledge of the slides would be good.

**What part(s) of the course did you like most?**  
 5 responses

Applying the previously learned topics hands-on during the labs. Also that the lab instructions did not have a 100% step by step guide, therefore I had to remember / understand previously learned topics.

Sharing experiences with others.

Practical labs

technical discussions

**What part(s) of the course did you like least?**  
 4 responses

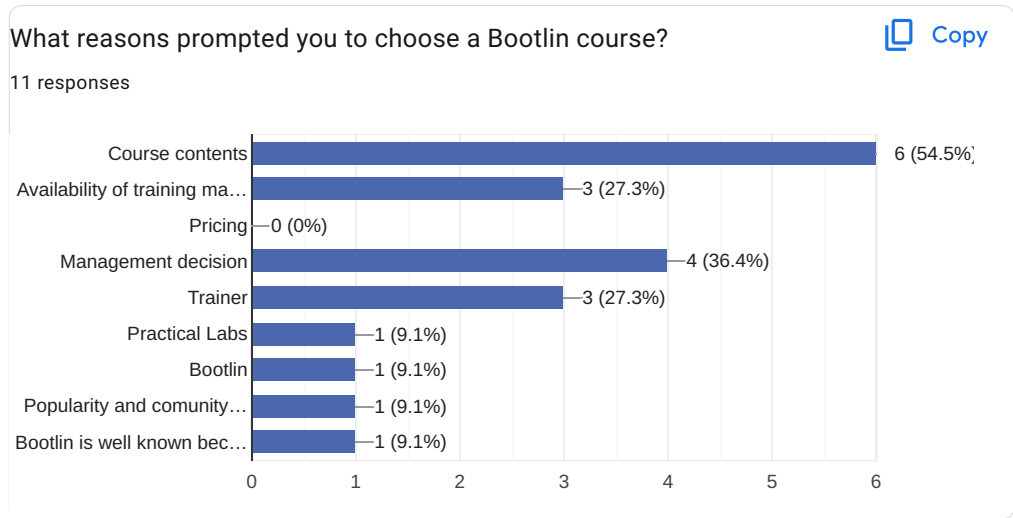

Some topics were taught, but the usage in the real world is unclear

Searching for what goes wrong in Yocto is not so nice. But this is not due to the course but due to Yocto.
