The course content is very satisfying, but I realized that I was missing many things because it was explained much faster than expected, if I had the option to access the course content later, at least I would have had the opportunity to repeat it and see what I was missing.

Please slower and make labs all together

More time for hands-on labs

Since the course is very dense there is not much time to study between a session and another, maybe spread the course over a larger period of time would help to study more between the sessions.

The course was interesting, and the trainer really good.

Due to the fast pace, it was hard to follow and understand everything, and do questions (i'm guessing that people attending this kind of course are working people, and don't have much time for studying).

It would be smart to study the material before the course, and spend more time on more accurate questions.

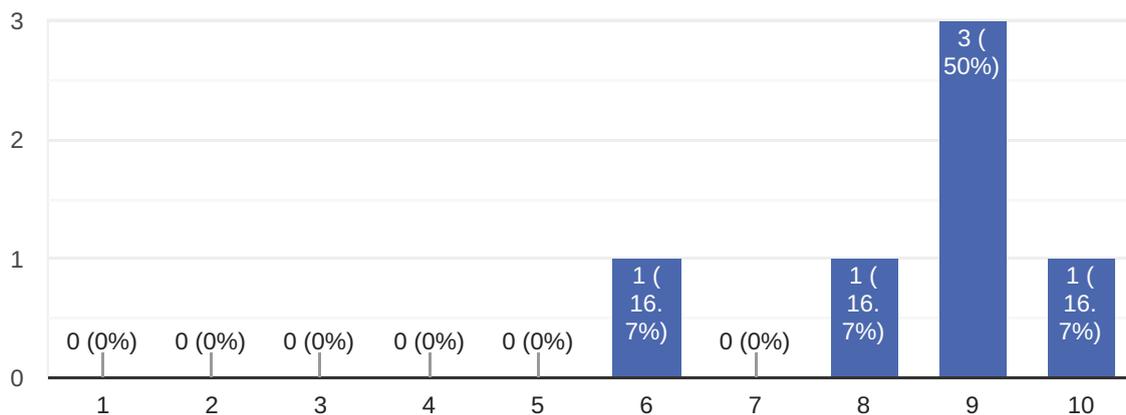

Fast pace for beginners, the scope of the course is wide it might need more time to cover it.

How useful were the lectures?

The course content is very satisfying, but I realized that I was missing many things because it was explained much faster than expected, if I had the option to access the course content later, at least I would have had the opportunity to repeat it and see what I was missing.

I would spend less time on minor arguments (e.g. Linux versioning)

How useful were the practical demos?

Do that together

Not enough time to catch up

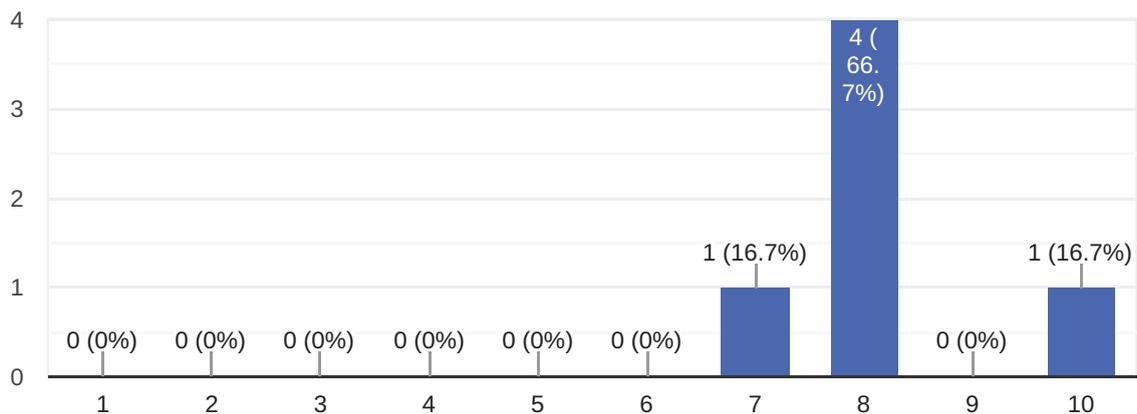

The practical demos are very useful but difficult to follow live, I know that the schedule is very strict, but take some more time for those could be an idea.

It would be better to spent more time on the demos, and allow the students to follow the demos on their boards

How would you rate the overall organization of the course?

What part(s) of the course did you like most?

6 responses

The embedded playground

drivers

Bootloader

Cross compiling toolchains

The material provided

Busybox, Kernel, Cross compiling

What part(s) of the course did you like least?

4 responses

Audio output drivers

Block filesystems

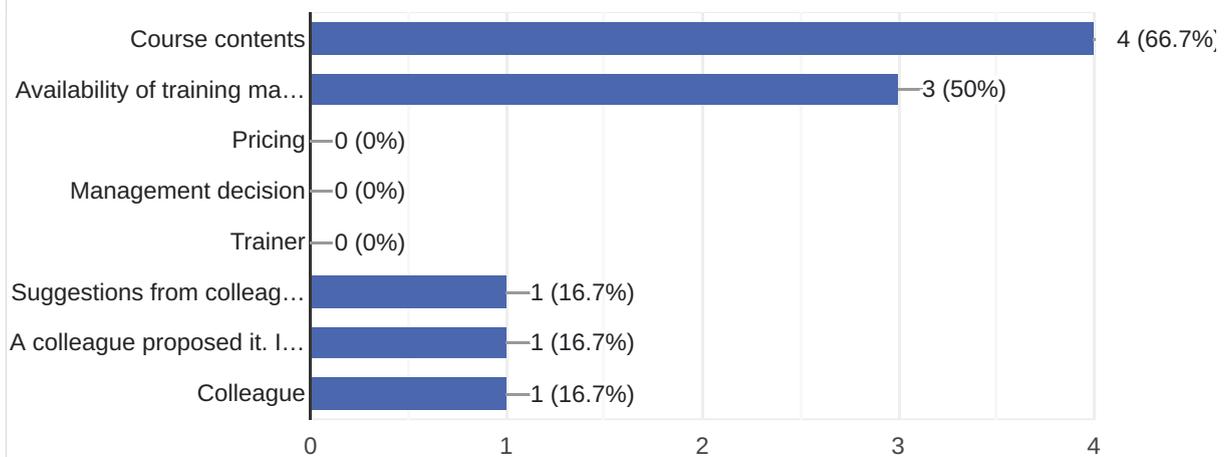

Too much time spent on not really useful arguments

Software stacks

What reasons prompted you to choose a Bootlin course?

I did not know Michael before the course, but if I had known it it would have been a reason to choose the course :)

Further training needs?

2 responses

I am quite interested on other courses from Bootlin, such as the one on graphics and the one on Yocto, for sure I will give a look to the training material.

Kernel driver and yocto. I will study the material and then i will attend the curses probably
